Application for Junior Software Developer (.NET) - Banking Systems

Dear Hiring Team,

I am applying for the Junior Software Developer (.NET) - Banking Systems position advertised on LinkedIn. I am a Computer Science student at Beirut Arab University, ranked 2nd in my class with a 3.97 GPA, and this year I have been building and running financial software in production.

As the technical founder and sole engineer of Dion, a point-of-sale and customer-wallet platform, I built the parts of a system that matter most in banking: a prepaid wallet and merchant ledger with immutable records, idempotent payment commands, split payments, refunds and auditable profit sharing. The platform is live at a venue and processes about 1,500 transactions and $20,000 a month, so I am used to the care that real money demands. Every change has to be tested, migrated safely and traceable afterwards.

Your role centres on APIs, SQL and reporting, which is the work I do every day. I design REST APIs and relational schemas, and I write the SQL behind a console that gives owners a live view of sales, staff activity and cash position. During my software engineering internship at NUST, I built a secured attendance platform and validated it with 539 automated tests, which taught me to test an update thoroughly before it ships. I have not yet worked professionally in .NET or SQL Server, but I work confidently in TypeScript, Java, C++ and PostgreSQL, and I pick up new stacks quickly.

I would welcome the chance to discuss how my experience with payment systems could contribute to your banking modules. Thank you for your time and consideration.

Kind regards,

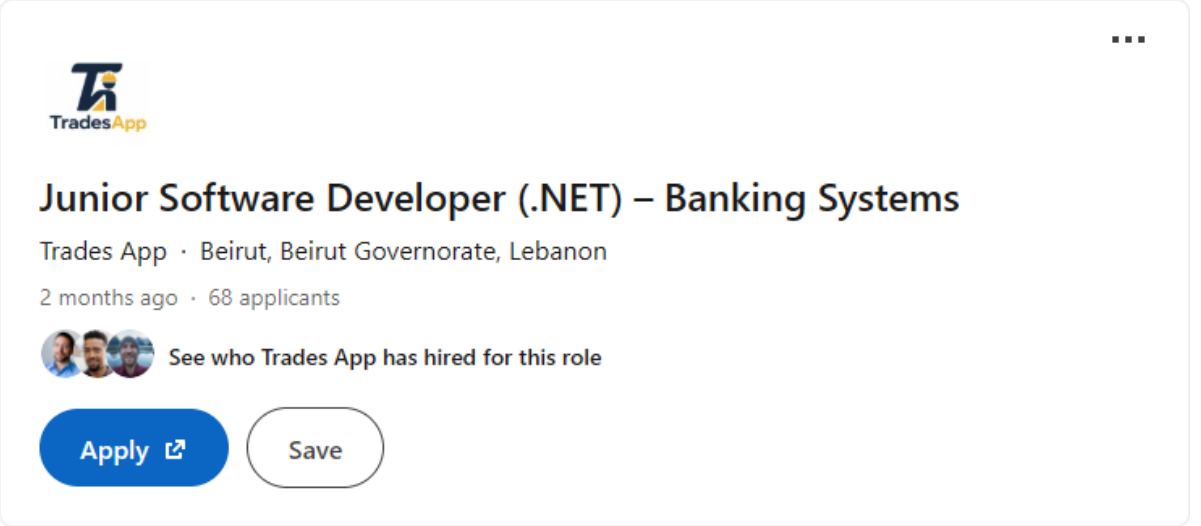

Kareem Mohammad Jobeily

JOB POSTING

Junior Software Developer (.NET) - Banking Systems

Trades App

Beirut, Lebanon | Entry level | Full-time

LinkedIn listing, captured on 15 November 2026.

ABOUT THE ROLE

The role involves developing and maintaining banking applications, testing updates to banking modules, and building queries and reports. The posting asks for one to two years of experience and lists ASP.NET, APIs, SQL Server, and reporting tools.
